

Zomato Analytics Dashboard Report

Power BI Business Intelligence Project

A complete analytical report showcasing restaurant performance, customer engagement, pricing trends, delivery analysis, and business insights using interactive Power BI dashboards.

Executive Summary

Business Problem
Zomato operates across multiple countries and cities with thousands of restaurants offering different cuisines, pricing tiers, ratings, and delivery services. The objective of this analysis is to understand restaurant distribution, customer satisfaction, pricing patterns, geographical performance, and service availability to identify growth opportunities and improve customer experience.

Project Objectives

- Analyze restaurant presence across countries and cities.
- Identify top-performing locations based on ratings.
- Understand customer preferences and cuisine distribution.
- Evaluate online delivery and table booking adoption.
- Analyze pricing segmentation across markets.
- Generate actionable business recommendations.

KPIs Used

- Countries Covered
- Cities Served
- Total Restaurants
- Unique Cuisines
- Average Customer Rating
- Revenue / Average Cost
- Online Delivery Coverage
- Table Booking Availability
- Restaurant Distribution by Price Range

Page 2: Zomato Global Restaurant Analytics Dashboard
This dashboard provides a high-level overview of Zomato's global restaurant ecosystem, highlighting restaurant distribution across countries, city coverage, cuisine diversity, customer ratings, pricing segments, and regional performance trends.

Page 3: Restaurant Distribution Dashboard
This dashboard focuses on restaurant distribution patterns, pricing categories, service availability, and geographical expansion. It helps understand market penetration, customer accessibility, and restaurant concentration across countries.

Page 4: Geographic Performance Dashboard
This dashboard evaluates restaurant performance across countries and cities using customer ratings, cuisine variety, average pricing, and service adoption metrics. It enables identification of high-performing regions and improvement opportunities.

Page 5: Key Insights
Summarizes the most important findings and patterns discovered from restaurant performance, customer ratings, pricing trends, and service availability across different countries and cities.

Page 6: Business Recommendations
Summarizes the most important findings and patterns discovered from restaurant performance, customer ratings, pricing trends.

Page 7: Future Scope / Business Value
Highlights potential future enhancements, advanced analytics opportunities, and the long-term business value generated through data-driven decision-making and performance optimization.

The Executive Summary provides a high-level overview of the entire Zomato analytics project. It highlights business problems, project objectives, KPIs, and dashboard architecture. The page summarizes analytical goals such as customer engagement, pricing analysis, delivery trends, and geographic restaurant performance.

Global Restaurant Analytics Dashboard

This dashboard presents global restaurant performance across countries and cities. It analyzes customer ratings, cuisine diversity, pricing segments, and restaurant distribution.

Geographic Performance Dashboard

This dashboard evaluates geographic restaurant performance across cities and countries. It tracks customer ratings, cuisine counts, delivery availability, and operational metrics.

Key Business Insights

 ***Key Business Insights***

Right

Market Presence:

- India represents the largest restaurant concentration within the dataset.
- Zomato operates across 15 countries and 142 cities.

Customer Experience:

- Average global customer rating stands at approximately 2.93.
- Several cities achieved perfect average ratings of 5.0, indicating highly rated local restaurant ecosystems.

Service Adoption:

- Only 25.7% of restaurants offer online delivery.
- Table booking availability remains low at 12.1%.

Pricing Trends:

- Medium-priced restaurants dominate the platform.
- Premium restaurants account for the smallest market segment.

Geographic Performance:

- Philippines, Indonesia, and Turkey exhibit the highest average customer ratings.
- India demonstrates significant market coverage but relatively lower average ratings compared to several international markets.

It highlights strong restaurant presence in India, medium-price market dominance, and lower table-booking adoption.

Business Recommendations

Business Recommendations :

Right

Expand Online Delivery Services:
Increase delivery partnerships in regions with strong restaurant density but low delivery penetration.

Improve Customer Satisfaction Programs:
Focus quality improvement initiatives in lower-rated countries and cities.

Premium Segment Expansion:
Promote premium dining experiences in high-income markets where premium restaurant representation is limited.

Enhance Reservation Features:
Encourage table-booking adoption through restaurant incentives and customer loyalty benefits.

Target High-Performing Markets:
Leverage best-performing countries and cities as benchmarks for operational excellence.

Recommendations include expanding online delivery services, improving customer experience, enhancing reservation systems, and promoting premium dining markets.

Future Scope / Business Value

Future Scope / Business Value

Right

Future Enhancements:

- Customer sentiment analysis using reviews.
- Restaurant demand forecasting using Machine Learning.
- Dynamic pricing analysis.
- Customer segmentation and recommendation engine.
- Competitive benchmarking across food delivery platforms.

Business Value Delivered:

- Improved market visibility.
- Better regional performance tracking.
- Enhanced decision-making through data-driven insights.
- Identification of expansion opportunities.
- Optimization of customer experience and service availability.

This section discusses future enhancement opportunities and business value generation. Potential improvements include machine learning forecasting, customer sentiment analysis, recommendation systems, and dynamic pricing models. These enhancements can support better strategic decision-making.
